Art Unit: 2857

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Page 2

2. Claims 1-13 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter and the claimed invention lacks patentable utility.

Please be advised that the "Interim Guidelines for Examination of Patent Applications for Subject Matter Eligibility" was signed on Oct 26, 2005 and posted on the uspto.gov website. The link is:

http://www.uspto.gov/web/offices/pac/dapp/ogsheet.html

Also see MPEP 2106, which covers computer implemented inventions and the manner in which they may be claimed and find statutory basis under 35 U.S.C. 101.

Note the claims do not recite any requirement of computer implementation. However, even if there were such claimed basis, they would still fail to meet the latest Guidelines criteria for having statutory basis in any type of claimed invention for algorithm based inventions. These claims fail to meet the minimal requirement of a useful, concrete and tangible result of a real physical world interactive end result supported by any algorithm steps, or structure supporting such calculated step, where the end result limitation/data supports the invention being used in a practical useful, concrete and tangible real world combination manner.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2857

4. Claims 1-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 preamble states the claim is directed to a method for determining resistivity in a geological formation crossed by a cased well. However, while body of the claim may state a final resistivity being calculated of such nature, the body of the claim still is incomplete for omitting essential steps of ever accomplishing the a tangible, concrete and useful interaction of such calculated result, and such omission amounting to a gap between the steps and the potential statutory invention using such calculation. See MPEP § 2172.01.

- 5. The prior art does not teach the claimed data processing requirements for the development of the resistivity result using the specified data components including deduced geometric factor k of the model.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Donald McElheny, Jr. whose telephone number is 571-272-2218. The examiner can normally be reached on Monday-Thursday from 7:30 to 4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hoff Marc, can be reached on weekdays at telephone number 571-272-2216. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
